1. What fan problem are you solving?

When friends watch live sports together remotely, they juggle three disjointed apps: the video stream, WhatsApp banter, and Dream11. Fans miss key moments switching tabs and struggle to immediately calculate how a sudden boundary or wicket impacts their fantasy leaderboard versus their friends in real time.

2. How does your solution help?

We built 'Match Buddy', an AI-powered live fantasy companion embedded directly inside a synchronized watch party. Fans paste any live stream URL (like YouTube) and watch in sync. After every ball, Match Buddy automatically calculates exact fantasy point deltas (+6 for sixes, +25 for wickets, captain multipliers), announces lead swings in chat, tracks head-to-head rankings, and runs instant 'What-If' projections (projecting leaderboard shifts if a 6, 4, or wicket drops).

3. Which AI tools did you use?

Google Gemini API for natural-language match commentary, witty point-swing summaries, and conversational companion Q&A ('Who is winning?', 'What if a boundary is scored?'), paired with an event-driven Go and WebSocket state engine.
